

# A Solution for Seizures?

Epilepsy is a brain disorder in which the sufferer experiences excessive neuronal discharges with loss or altered state of consciousness in the brain. Each year, The U.S. spends \$16 billion in the management of epilepsy.

Chiropractic has long had a history of positive results with epileptic and seizure related disorders. A 2015 case study reported on a 2 year old boy who experienced frequent seizures. Upon examination, his chiropractor found subluxation at the top bone of the spine, the atlas. After 5.5 months of chiropractic care, the boy is seizure free!

By reducing nerve interference due to subluxation, neuronal stimuli are reduced in the brain. This causes the brain to function better and decreases the likelihood of excessive neuronal discharge which causes seizures. Do you know somebody suffering with seizures or epilepsy? Have they been checked for nerve interference?  
*No matter the symptom, chiropractic can help the body function better, allowing you to be healthier!*

**“After 5.5 months of care...the patient is now seizure free, no longer exhibiting behavioral problems and has shown improvement in both language development and cognitive abilities.”**

Komarek AJ, Tedder N, Tedder A. Cessation of seizures, behavioral disturbances and improvement in cognitive developmental delay following upper cervical chiropractic care in a 2 year old: A case report. J Upper Cervical Chiropr Res. 2015 Spring;2015(2):Online access only p 14-18.
